**PURE FOOD  
LAW WORK****Commissioner Duncan's  
Report for Month  
of November.**

R. A. Duncan, Food Commissioner, in his report to Dr. C. B. Cooper, president of the Board of Health, for November, says that one hundred and eight samples of milk were examined. Only two of these samples were below the standard. These were from V. Souza and Marques, a driver for Vivas.

Samples from 20 cows of one dairy whose milk had been reported several times as being below standard were examined. It was pleaded by the dealer that the cows were giving poor milk. The analyses, however, showed the milk to be of good quality and, since the samples taken, the milk supplied on the street has been found to be above standard.

A sample taken from A. Ludloff on November 14 contained boric acid as a preservative, but samples taken from the same dealer later had been found without that ingredient.

**POLICE SERVICE.**

"From the first to the middle of the month my time was taken up with examinations in connection with coroners' inquests," the Commissioner says; "one sample being made of a stomach contents sent by Dr. Davis of Ewa (in which strychnine was found), and a stomach contents, handed in by Dr. Pratt, of a Japanese who died suddenly in Palolo valley, no poison being found in the latter case."

**ANALYSES OF WATERS.**

"At the request of Dr. Pratt analyses of waters used in making poi and of waters supplying a lodging house, were made."

"Analyses of water supplying a poi shop, Molili: two analyses of this water were made, one November 8, and the other November 19. The results are expressed in parts per million:

Sample	Nov. 8.	Nov. 19.
Free ammonia	0.162	0.085
Albuminoid ammonia	0.084	0.175
Nitrogen as nitrates	0.25	2.00
Nitrogen as nitrites	trace	0.008
Chlorine	39	117
"Required Oxygen"	0.9	1.35
Total residue	305	540

"This well is located in the district draining Manoa valley, and, being a subsoil water, should be comparatively pure. The coral underlying this district should have a purifying effect due to filtration. The analyses of this water show a remarkable change during the period from the taking of the first sample to that of the second. As waters of this class should not change very much from time to time, it is evident that this water is occasionally contaminated, as, for instance, the drainage from cesspools during heavy rains. The close proximity of cesspools shows that the contamination is probably from that source. I regard this matter as slightly suspicious, and, while it might perhaps be used without danger, still its use in the manufacture of poi is unwise in that it may be the source of infection over a considerable area."

"Analyses of water from two wells supplying a lodging house (Akaboshi): results in parts per million:

Free ammonia—makai well, 0.80; mauka well, 0.21; two analyses, 0.065.
Albuminoid ammonia—makai well, 0.10; mauka well, 0.00; two analyses, 0.070.
Nitrogen as nitrates—makai well, 1.50; mauka well, 0.25; two analyses, 1.00.

"The mauka well is about thirty feet from a cesspool and slightly ewa, with reference to the cesspool, of the underground flow of the district. This water is no doubt contaminated with the drainage from the cesspool and is not fit for human consumption."

"The mauka well, while not being a good water, still the analysis does not show it to be polluted as much as the other well examined. This well may be regarded with suspicion, and from its proximity to a cesspool (30 feet), it is probably slightly contaminated."

**EXAMINATION OF FOODS.**

"The following foods were examined: "One sample Miller's malt extract at request of private party: Alcohol, 5.6 per cent; extract, 9.40; proteins, 0.54; ash, 0.20."

"One sample of honey: no adulteration."

"The following goods were condemned:

"Three cases condensed milk, Nov. 7. "One dozen bottles of anchovies, Nov. 7."

"Three cases condensed milk, Nov. 27. "A substance of unknown origin, sent to the Police Department, was referred to me for examination and report made thereon."

**A Lucky Find.**

Great excitement prevailed at the fish market early this morning, when a monster shark, the largest ever seen here, was brought in by some Jap fishermen, who immediately proceeded to cut the carcass up. The dorsal fin of the sea monster, measured nearly seventy-two inches, and will be presented to the Bishop Museum. But the bystanders nearly went wild when upon opening the stomach of the shark a variety of ship's instruments and sailors' clothes were found, upon examining the lining of the stomach there were also found several cards explaining the merits of the Douglas Patent Closet, sold by Bath the Plumber, and guaranteed against leakage, and the annoyance of running water. Phone Main 999.

**HAWAIIAN  
LIGHTHOUSES****Governor Carter Wants  
Separate District  
Created.**

Governor Carter is much gratified with the promptness with which the Survey Department has prepared surveys and descriptions of Hawaiian lighthouse properties, which he will forward to Washington by the next mail.

The Governor said yesterday afternoon that he did not propose to make a proclamation of the lighthouse sites for the present, because there are some in which the Government has not the title and others whose locations are neither definite nor suitable.

Governor Carter has written to Delegate Kubio to take up the matter with Secretary Cortelyou of Labor and Commerce, under whose department is the Lighthouse bureau, also with Secretary Moody of the Navy and Secretary Shaw of Finance. In his letter to the Delegate the Governor suggests a plan whereby the Federal authorities may immediately declare these islands a new lighthouse district, and not simply a part of the California district, and appoint an inspector to take charge of it. Consultation with the head of the Finance Department is recommended so that there will be no hitch in provision of means, and with the head of the Navy Department so that the U. S. S. Iroquois may help in establishing and maintaining the system of lighthouses.

Surveyor Walter E. Wall, in his report, gives descriptions by metes and bounds of eleven lighthouse premises. He suggests that if parcels of land are to be set aside for public purposes by proclamation, a clause be added, "subject to any private rights that may exist."

Undoubtedly it will be found by experts, the Surveyor sets forth, that some of the lighthouses can be located to better advantage than at present. Again, there are a number of other points where lighthouses are much needed. Sites can easily be obtained, for the reason that the land is of little or no use for any other purpose.

There is no description of Honolulu harbor light sites, because the property already belongs to the Federal Government.

It is reported impracticable by Mr. Wall to set aside the sites occupied by Kaunakakai, Lahaina and Maalaea. At Kaunakakai the range lights are situated inshore and on the line of private buildings. The lights should be moved out to the mud flats. Lahaina light is situated between the wharf and street property on a parcel of land too limited for anything more than the present structure. Maalaea light is hoisted on a pole at the end of the wharf.

Surveyor Wall furnishes the following list with geographical locations of the eleven existing lighthouses:

1. Barber's Point, 21:17:58 N., 158:08:32 W.
2. Diamond Head, 21:15:32 N., 157:48:44 W.
3. Ka Lae o ka Laau, 21:06:16.5 N., 157:18:47 W.
4. Kaula, 20:15:00 N., 155:46:00 W.
5. Kawaihae, 20:02:39 N., 155:50:06 W.
6. Laupahoehoe, 19:59:40 N., 155:14:39 W.
7. Mahukona, 20:11:00 N., 155:54:00 W.
8. Makena ("Kinau" light), 20:36:00 N., 156:26:00 W.
9. Nawiliwili, 21:51:20 N., 159:20:21 W.
10. Paukaa, 19:46:10 N., 155:06:35 W.
11. Pepeekeo, 19:50:59 N., 155:05:12 W.

**NEW ENGLAND NOT  
THE WHOLE CHEESE**

Editor Advertiser: I find this in today's Advertiser: "The conception of town meetings originated in the determination of New England colonists to govern themselves in all matters that were municipal." In the interest of historic truth, exception must be taken to this statement. Township government is not a conception but a growth, a political fabric, the warp and woof of which has been woven on the "Roaring loom of time." Winthrop, Robinson, Endicott and Bradford brought it from old England to New England. It was brought to Virginia by the founders of that colony under a slightly different name, viz., vestry meeting. It is the oldest form of government known to the Indo-European race. It was brought to England by our Anglo-Saxon ancestors in the sixth and seventh centuries of our era. It was known and commented upon by Tacitus in his "Germania." It is of very ancient origin in Russia, there known under the name of the Mir. Sir Henry Maine, in his "Primitive Society," says that it was known to the Aryans while they yet lived in central Asia. The township was the geographical area of the clan, and the town meeting was the open government of the clan, in full meeting by the assembled people. New England is the originator of many beneficent institutions in government and education for the improvement of man; but let us not claim too much for her. She is the author of neither the mince-pie, the doughnut, the chowder, the town meeting nor the Ten Commandments. She has developed and applied all these things in a most beneficent way, under conditions which she found the most favorable in the new world.
